7. Wordwall games
8. Words on the site
9. How to play
10. Home page
11. Homework
12. Admins
13. What students see
14. Tips and fixes

1. The site in short

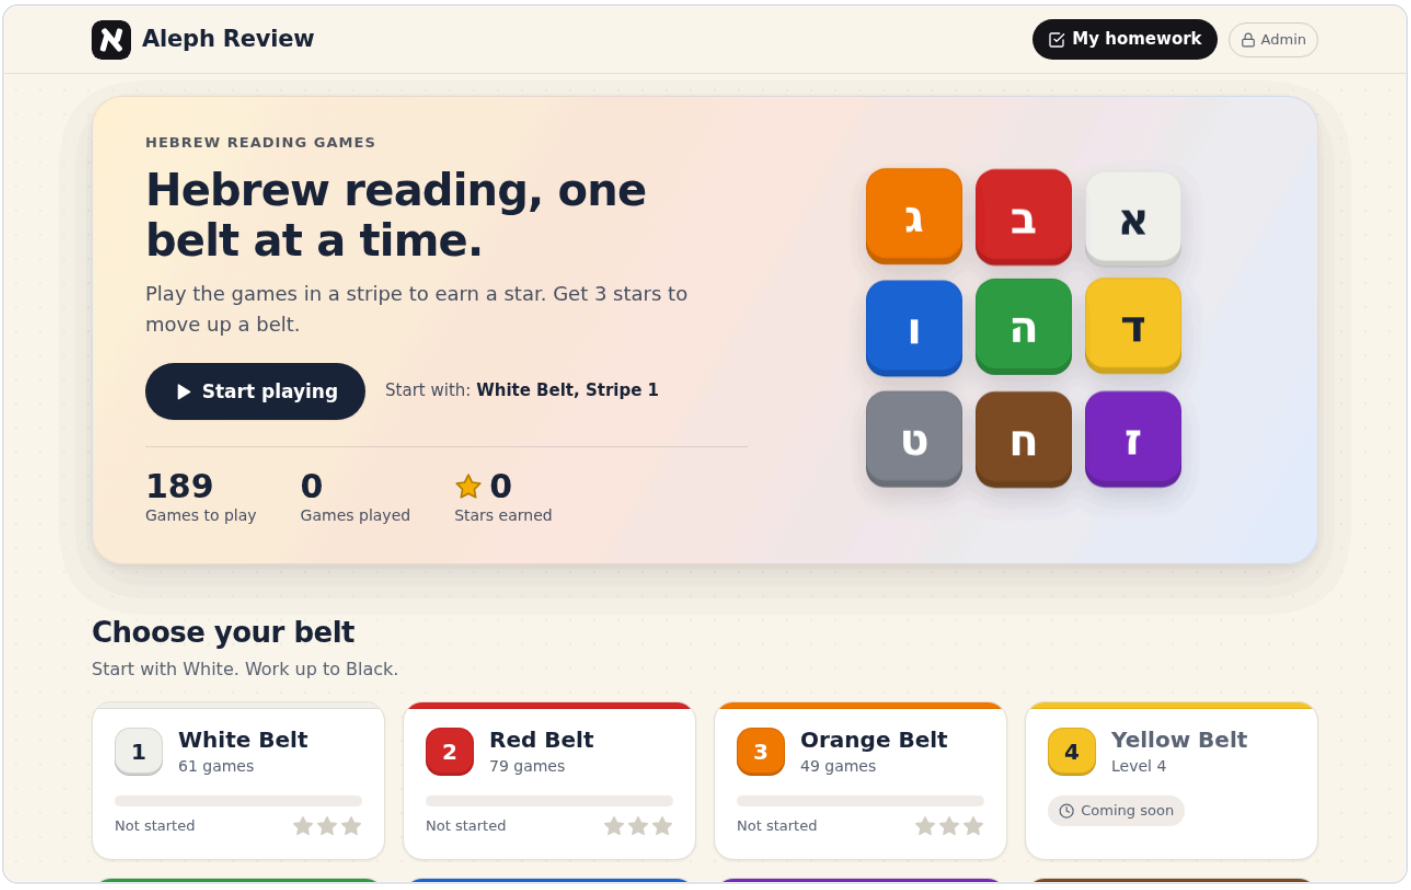

Aleph Review is a website of Hebrew reading games for students. The games are sorted like karate belts:

- **10 belts**, in this order: White, Red, Orange, Yellow, Green, Blue, Purple, Brown, Gray, Black.
- **3 stripes** in each belt. Each stripe has its own games.
- A belt or stripe with no games shows *Coming soon* and can't be opened.

Students play without signing in. They only sign in with Google to see **homework**.

- **"Played"** (the green badge at the top) counts the different games opened *on that computer, in that browser*. It needs no sign-in. A different computer or browser, or clearing the browser's data, starts again at 0.
- Students earn a ★ **star** for each stripe where they played every game.

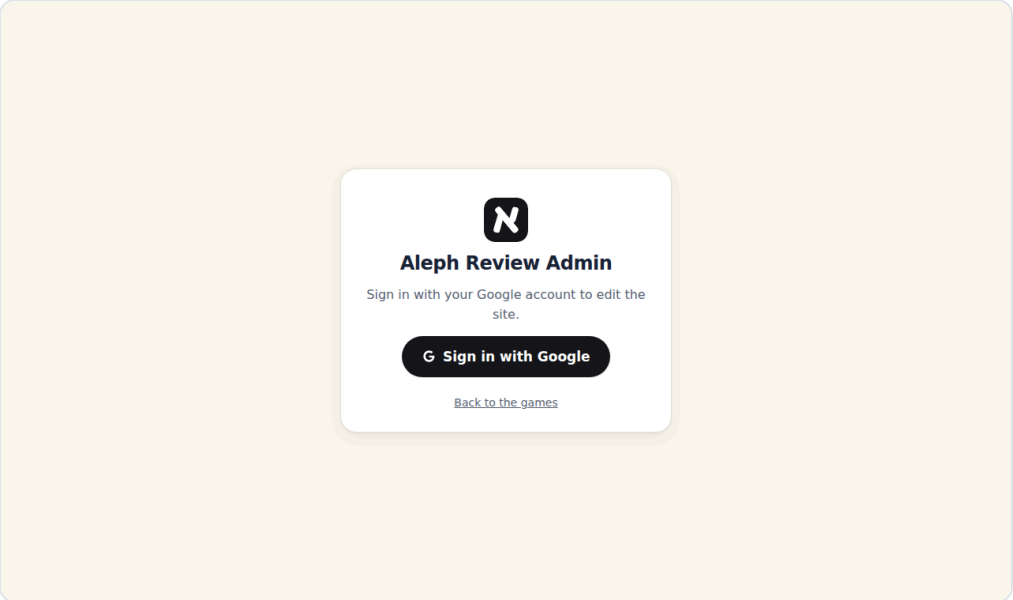

Admins (teachers) change everything on the **admin page**: games, words, the home page, homework and other admins. Nothing needs code.

The home page students see.

2. Signing in

1. On the site, click **Admin** at the top right.
2. Click **Sign in with Google** and pick your school Google account.
3. If your account isn't an admin, the page says so. Click **Use a different account** to try another one.

The admin page stays locked until an admin signs in.

Two kinds of admins

Full admins	Can do everything, including adding and removing sub-admins. The list of full admins is kept in the Firebase security rules (Firebase console), not on the admin page.
Sub-admins	Can do everything on the admin page (games, words, homework, publishing) except manage admins. Full admins add them on the **Admins** tab.

To sign out, click **Sign out** at the top right of the admin page.

3. The top bar: Preview and Publish

Changes to **games, words, How to play and the home page** are a draft first. Students don't see them until you publish.

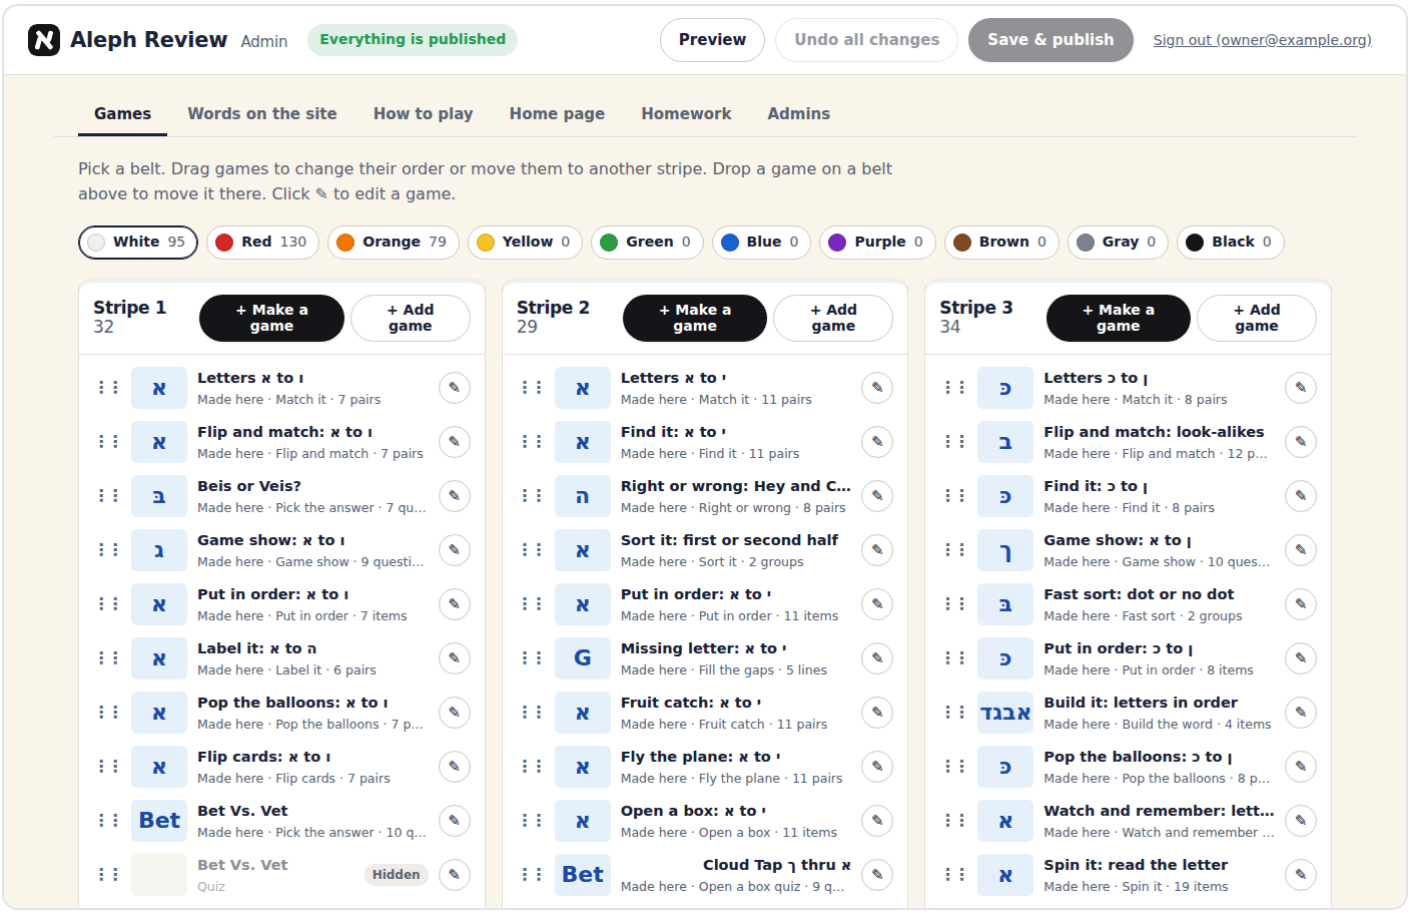

Status (next to the logo)	**Everything is published**: students see what you see. **Unsaved changes**: you changed something that isn't live yet.
Preview	Opens the student site with your changes, so you can check them before students see them.
Undo all changes	Throws away every change since the last publish.
Save & publish	Makes your changes live for everyone. Students see them after they reload the page.

Your draft is kept in this browser.

If you close the tab without publishing, your changes are still there next time. The page asks *"You have changes that weren't published yet. Keep working on them?"*: **OK** keeps them, **Cancel** starts from the live site.

Homework, classes and admins save right away.

They don't need Save & publish. Only games, words, How to play and the home page do.

The admin page, Games tab. The top bar has the status, Preview, Undo all changes and Save & publish.

4. Games tab

- **Pick a belt** from the colored chips. The number is how many games the belt has.
- Each **stripe** is a column. Games show in the order students see them.
- Each row shows the game's picture, name and type. **"Made here"** means a game made on this site (it has a score and can be homework). A gray row with **Hidden** is hidden from students.

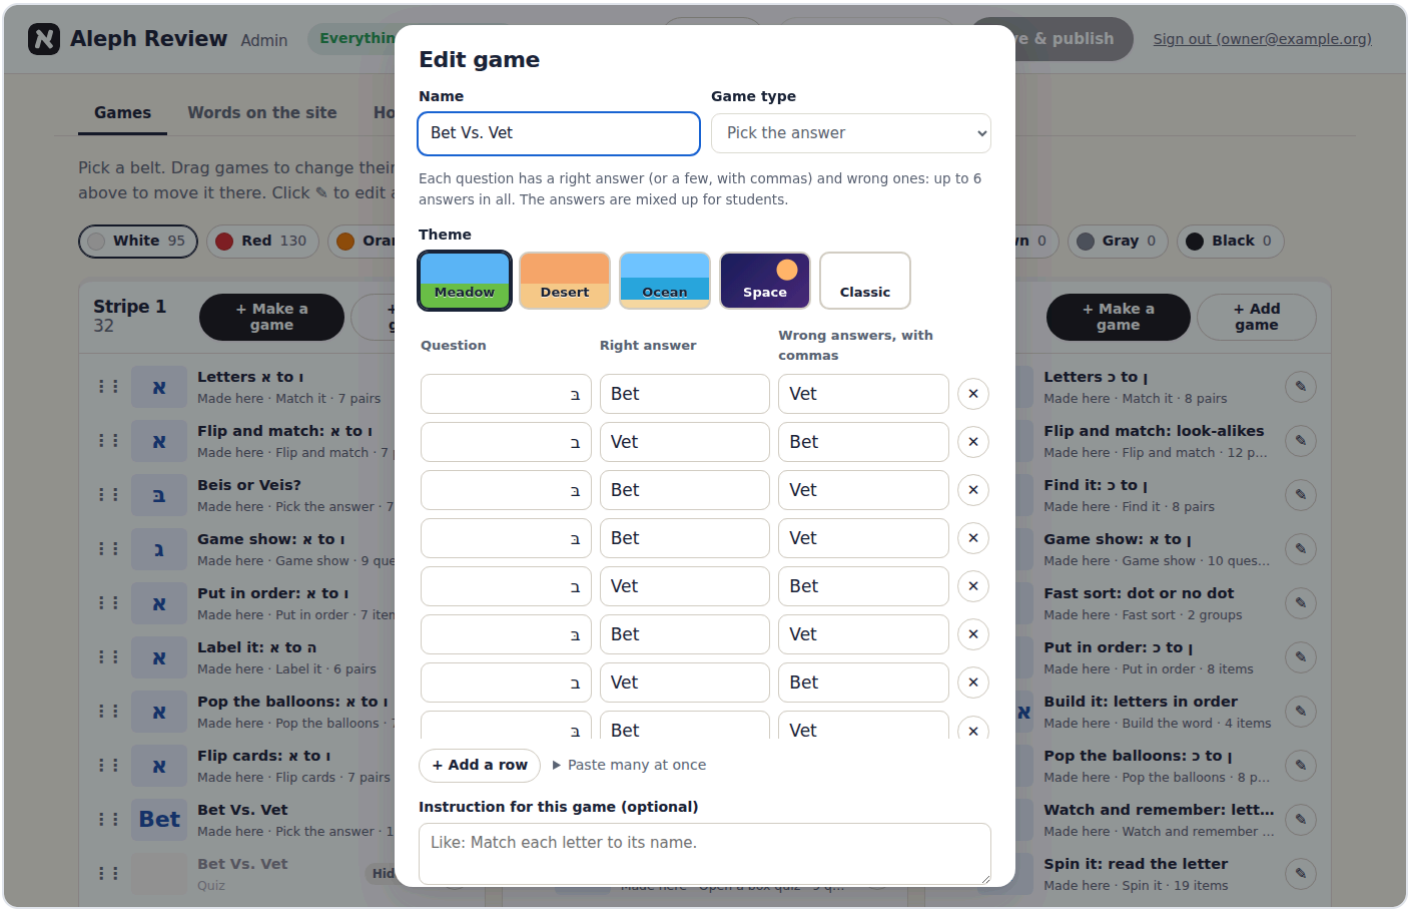

Moving games

- **Change the order:** drag a game by its ⋮⋮ handle up or down.
- **Move to another stripe:** drag it into another stripe's column.
- **Move to another belt:** drop it on a belt chip at the top. Or edit it and change **Belt** and **Stripe**.

Editing a game

Click ✎ on a game. For a game made here you can change its name, theme, content, instruction, belt and stripe. You can also:

- **Hide this game from students:** it stays on the admin page, so you can show it again later.
- **Delete game:** removes it for good (after you publish).
- **Save and try it:** saves and opens the game in a new tab so you can play it.

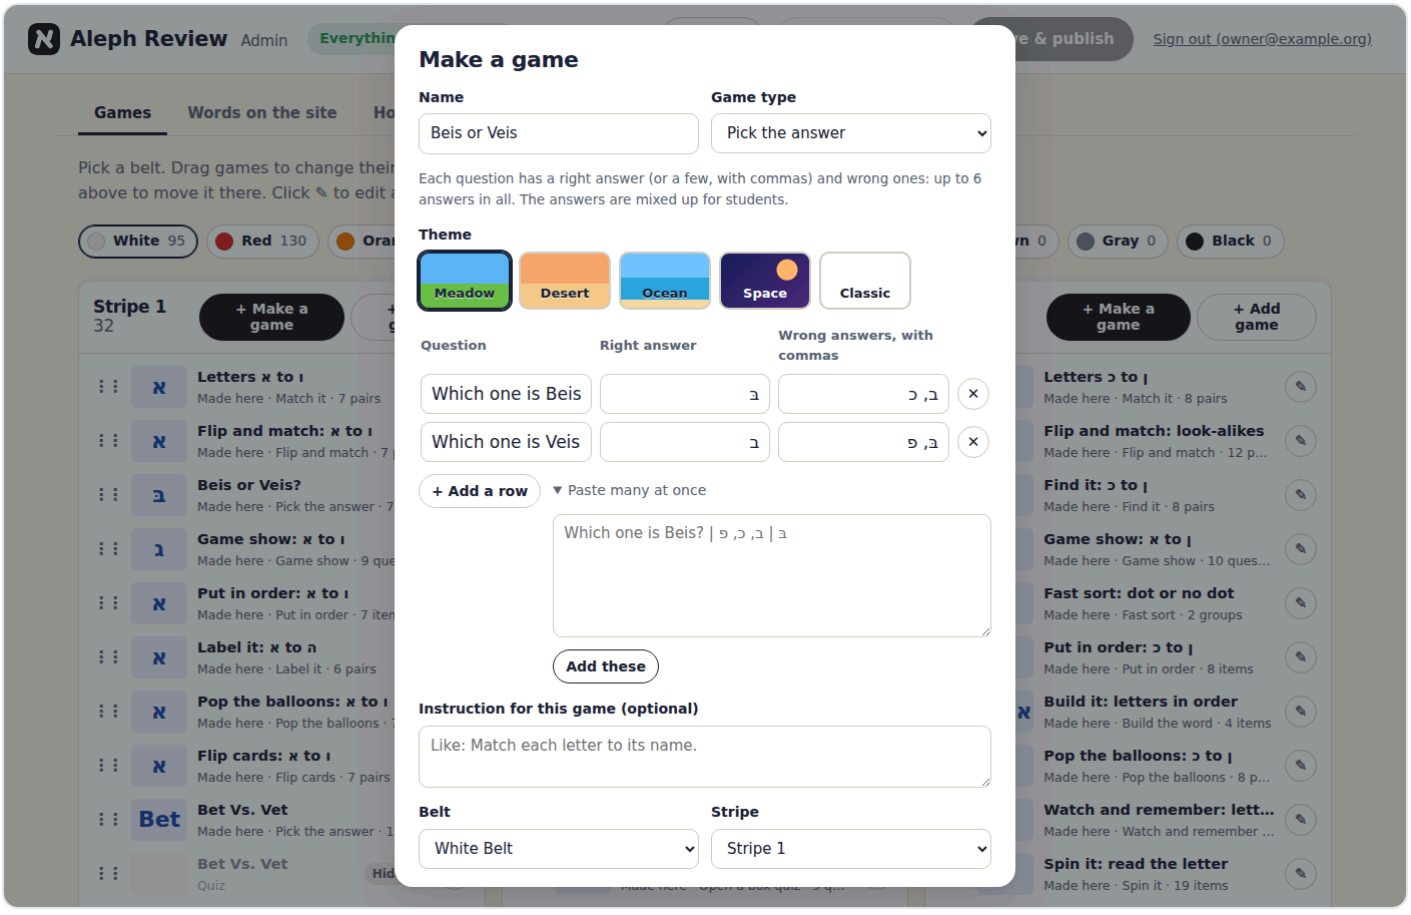

Editing a game made here.

Remember: after changing games, click **Save & publish**.

5. Making a game

1. On the Games tab, pick a belt and click **+ Make a game** on a stripe.
2. Type a **Name** and choose a **Game type**. The gray line under it says what the type needs.
3. Pick a **Theme**: the picture behind the game (Meadow, Desert, Ocean, Space or Classic).
4. Fill in the rows. Click **+ Add a row** for more.
5. Or use **Paste many at once**: one row per line, parts split by **|**. Pairs can also use **=**. Then click **Add these**.
6. Optional: an **Instruction** line. It shows under How to play for this game only.
7. Click **Save and try it** to play it, or **Add game**. Then **Save & publish**.

Making a "Pick the answer" quiz with Paste many at once.

Paste many: examples

Pairs: `Alef = (the letter)` or `(letter) | Alef`
Questions: `Which one is Beis? | (right answer) | (wrong), (wrong)`
Groups: `Beis | (item), (item), (item)`
Lines with gaps: put **[ ]** around the missing part, like `(letter) (letter) [(letter)] (letter)`

Games with more rows than one round holds are split into even rounds by themselves.

6. All the game types

Every type below is made on this site, so it knows the score. All of them can be homework except the four marked *, which have no right or wrong answers.

Type	Like Wordwall's	What you type in
Match it	Match up	Pairs: a tile, and the word it goes next to.
Flip and match	Matching pairs	Pairs, played as face-down cards.
Find it	Find the match	Pairs: students see the word and tap its tile.
Right or wrong	True or false	Pairs (the site mixes some up), or rows with yes/no.
Pick the answer	Quiz	Questions: question | right answer(s) | wrong answers.
Game show	Gameshow quiz	Questions, with a clock and two helps (50:50, Second try).
Win or lose	Win or lose quiz	Questions; students pick points before each one.
Sort it	Group sort	2 to 4 groups: group name | items.
Fast sort	Speed sorting	2 groups; tiles come one at a time.
Sort the table	Categorize	Groups shown as columns, checked with Submit.
Put in order	Rank order	A list, typed in the right order.
Build the word	Anagram	Words; the letters keep their vowels.
Fill the gaps	Complete the sentence	Lines with [ ] around the missing parts.
Label it	Labelled diagram	Pairs: a big part on a board, and its label.
Pop the balloons	Balloon pop	Pairs: the tile on the balloon, the word on its cart.
Fruit catch	Flying fruit	Pairs or questions: what to find.
Whack it	Whack-a-mole	Pairs, or groups (hit the first group only).
Fly the plane	Airplane	Pairs or questions: fly into the right cloud.
Watch and remember	Watch and memorize	Tiles to remember (at least 8).
Spin and answer	Spin the wheel (quiz)	Questions: the wheel picks one.
Open a box quiz	Open the box (quiz)	Questions: one in each box.
Spin it *	Spin the wheel	What's on the wheel.
Open a box *	Open the box	What's in the boxes.
Flip cards *	Flash cards	Front and back of each card.
Pick a card *	Speaking cards	The cards in the deck.

Every game made here has a Start screen, a clock, a sound button (sound on/off), a score at the end, **Try again** and **Show answers**. Some games also read aloud with the computer's voice; the sound button turns that off too.

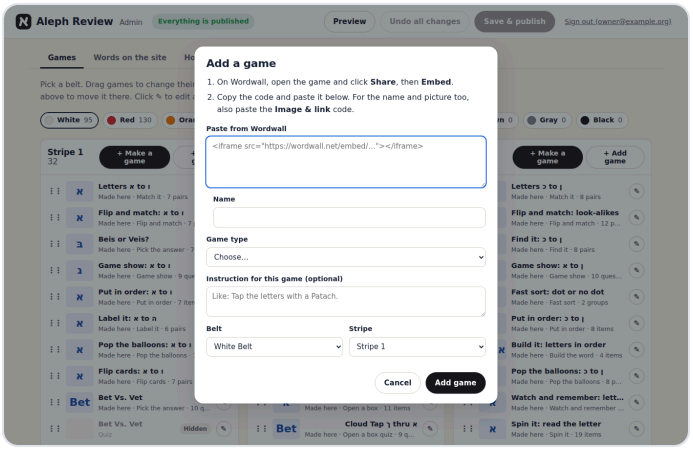

7. Wordwall games

The site first used games from Wordwall. Every Wordwall game has been copied into a game made here, with the same title, words and answers, in the same place. The Wordwall versions are **hidden** (still on the admin page, marked Hidden).

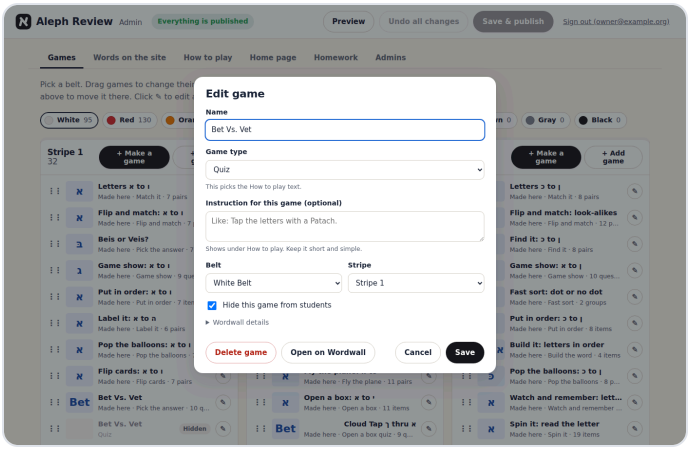

- Wordwall can't tell the site a student's score, so **Wordwall games can't be homework**. That's why they were copied.
- Where Wordwall showed a letter as a picture, the copy has the letter typed in. For some picture-only games the letters are a best guess; you received a separate list of those to check.
- To bring a Wordwall game back: click ✎, untick **Hide this game from students**, Save, then **Save & publish**.

Adding a new Wordwall game

1. On Wordwall, open the game, click **Share**, then **Embed**, and copy the code.
2. On the Games tab, click **+ Add game** on a stripe and paste it. The site fills in what it can, like the name and picture.
3. Choose the **Game type** (it picks the How to play text), then **Add game** and **Save & publish**.

Adding a Wordwall game.

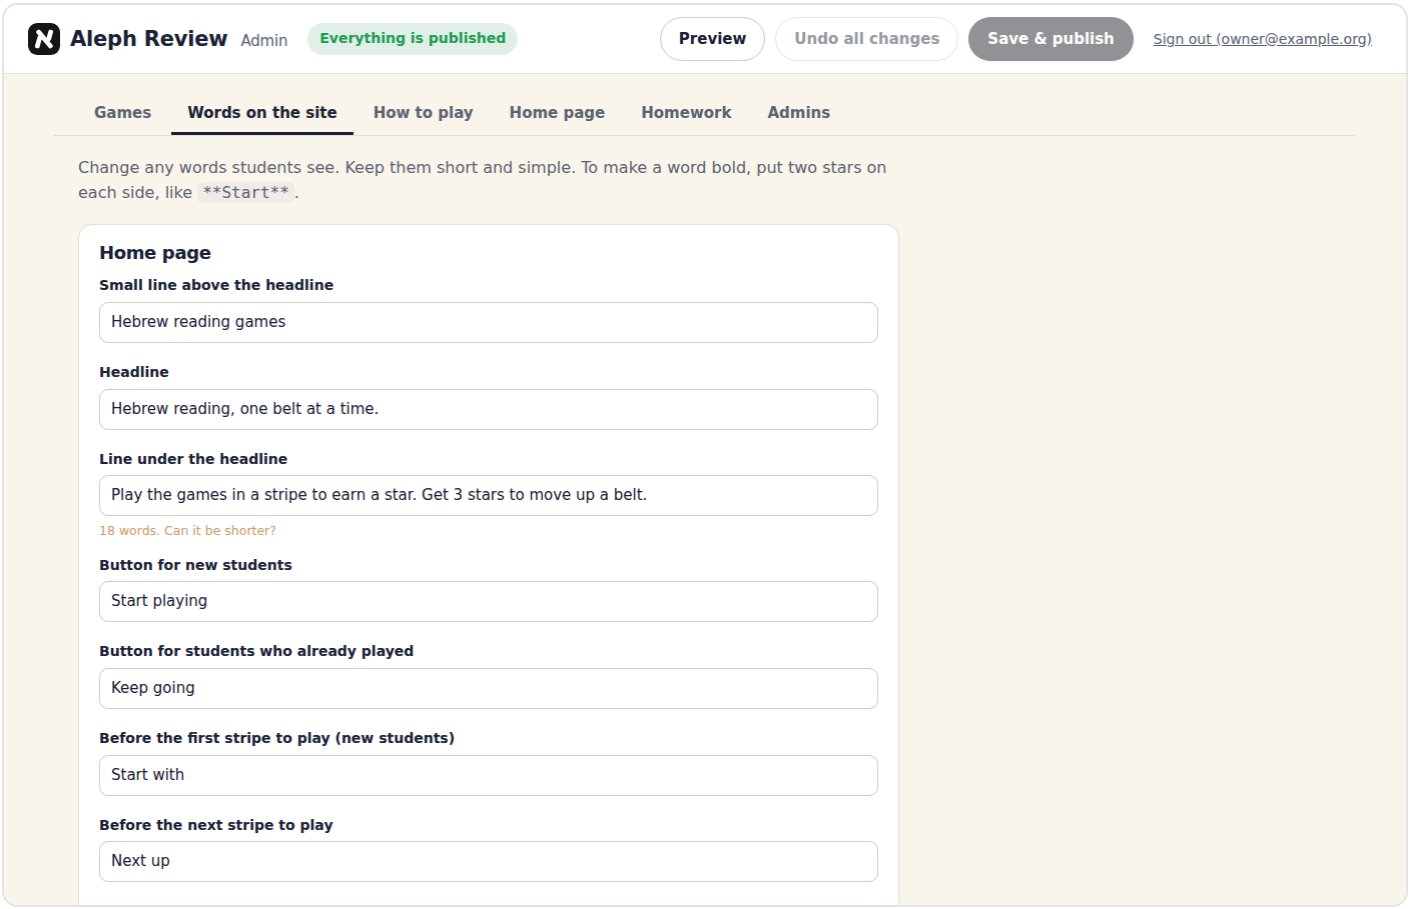

Editing a Wordwall game: Hide, Delete or Open on Wordwall.

8. Words on the site

Every word students see can be changed here: the home page, belts and stripes, How to play, the stripe-done message, homework, the words inside games, and the footer.

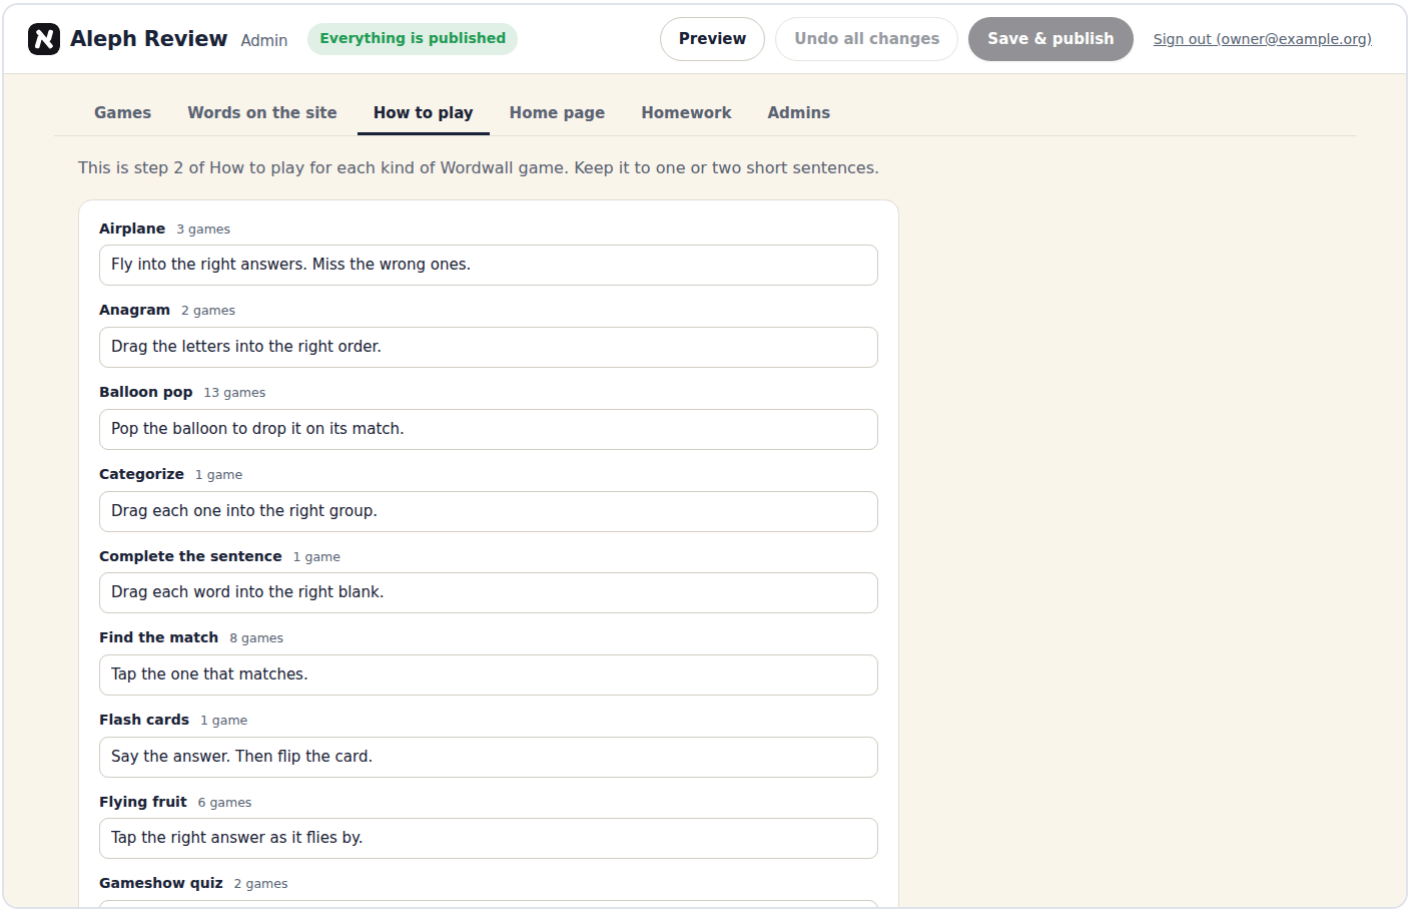

- Keep words short and simple. Students are kids.
- To make a word **bold**, put two stars on each side: `**Start**`.
- Words in curly brackets, like `{n}` or `{belt}`, are filled in by the site. Keep them.

Words on the site.

9. How to play

Each game page has a **How to play** box with 3 steps. Step 2 comes from the game's type and is set here, one line per game type. A game's own **Instruction** (set when editing the game) is added under it.

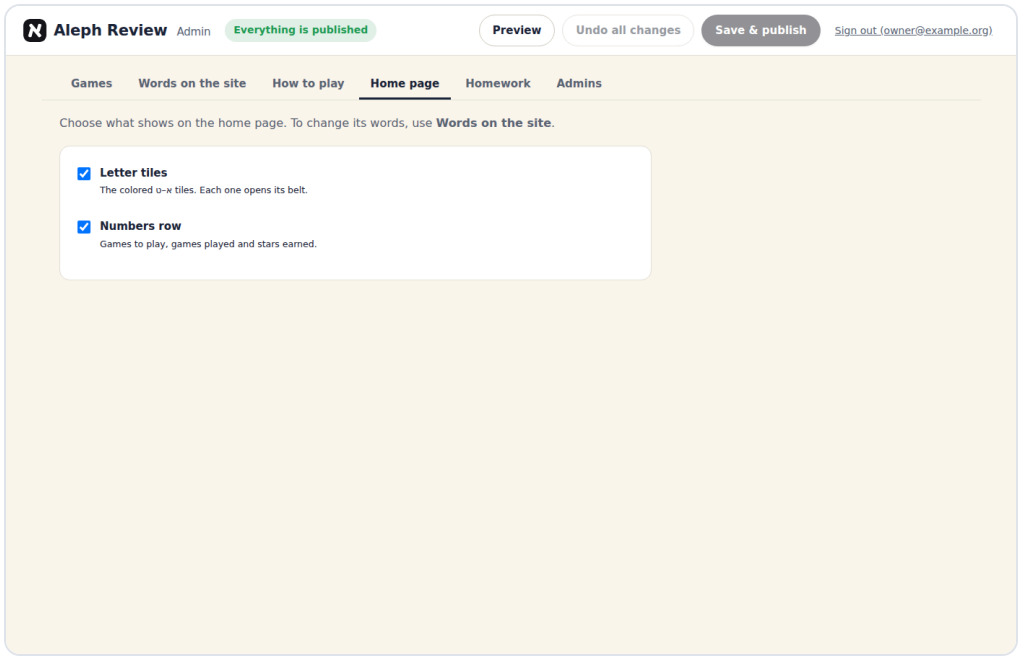

How to play: step 2 for each game type.

10. Home page

Choose what shows on the home page:

- **Letter tiles:** the colored letter tiles. Each one opens its belt.
- **Numbers row:** games to play, games played and stars earned.

To change the home page's words (headline, buttons), use **Words on the site**.

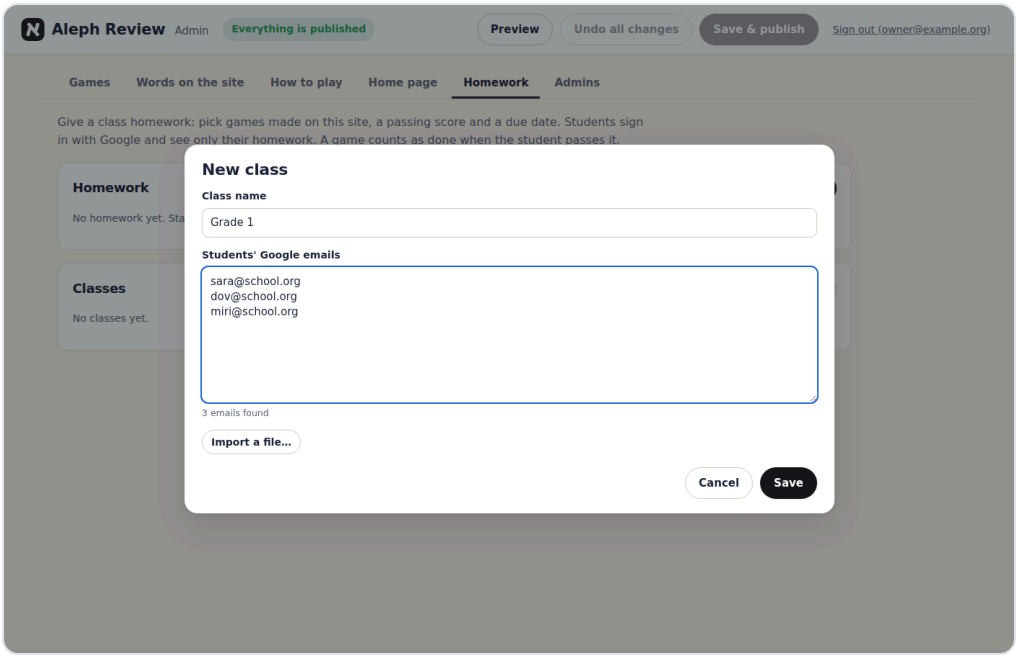

Home page settings.

11. Homework

Give a class games to do at home and see who passed. Homework uses only games made on this site (not Wordwall games, and not the four card games with no score).

Step 1: make a class

1. On the **Homework** tab, click **+ New class**.
2. Type a **Class name** and paste the students' **Google emails**, one per line (or with commas). **Import a file…** takes a CSV or text file, like a Google Workspace export.
3. Click **Save**. It saves right away.

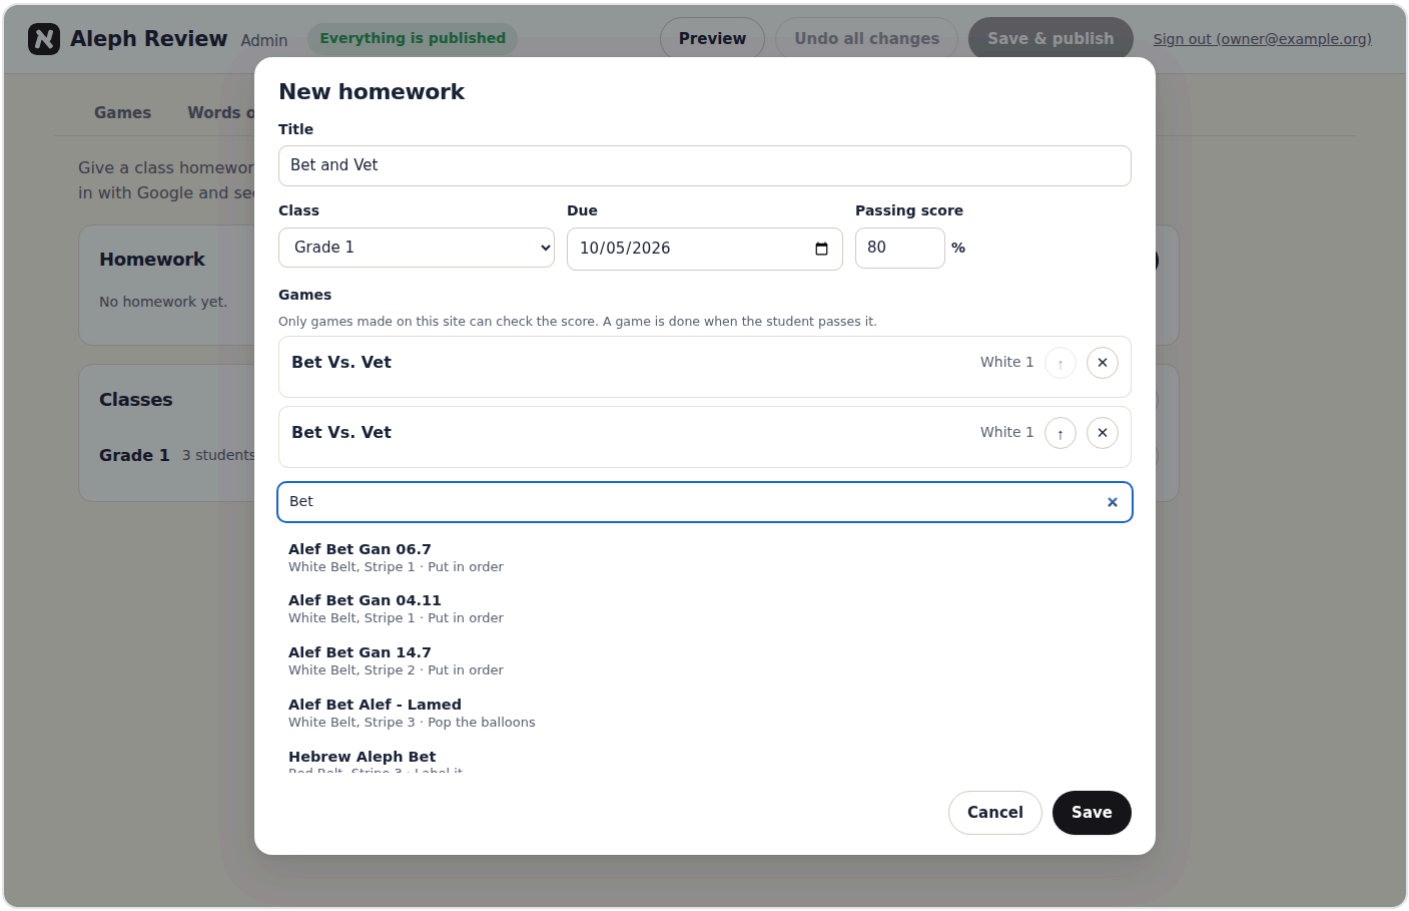

A new class.

> **Use the right emails.**
> Students see only homework for the email they sign in with. It must match the email in the class.

Step 2: make homework

1. Click **+ New homework**.
2. Type a **Title**, pick the **Class**, a **Due** date and the **Passing score** (for example 80%).
3. Under **Games**, type in the search box and click games to add them. Use ↑ to change the order and ✕ to remove one.
4. Click **Save**. The class can see it right away.

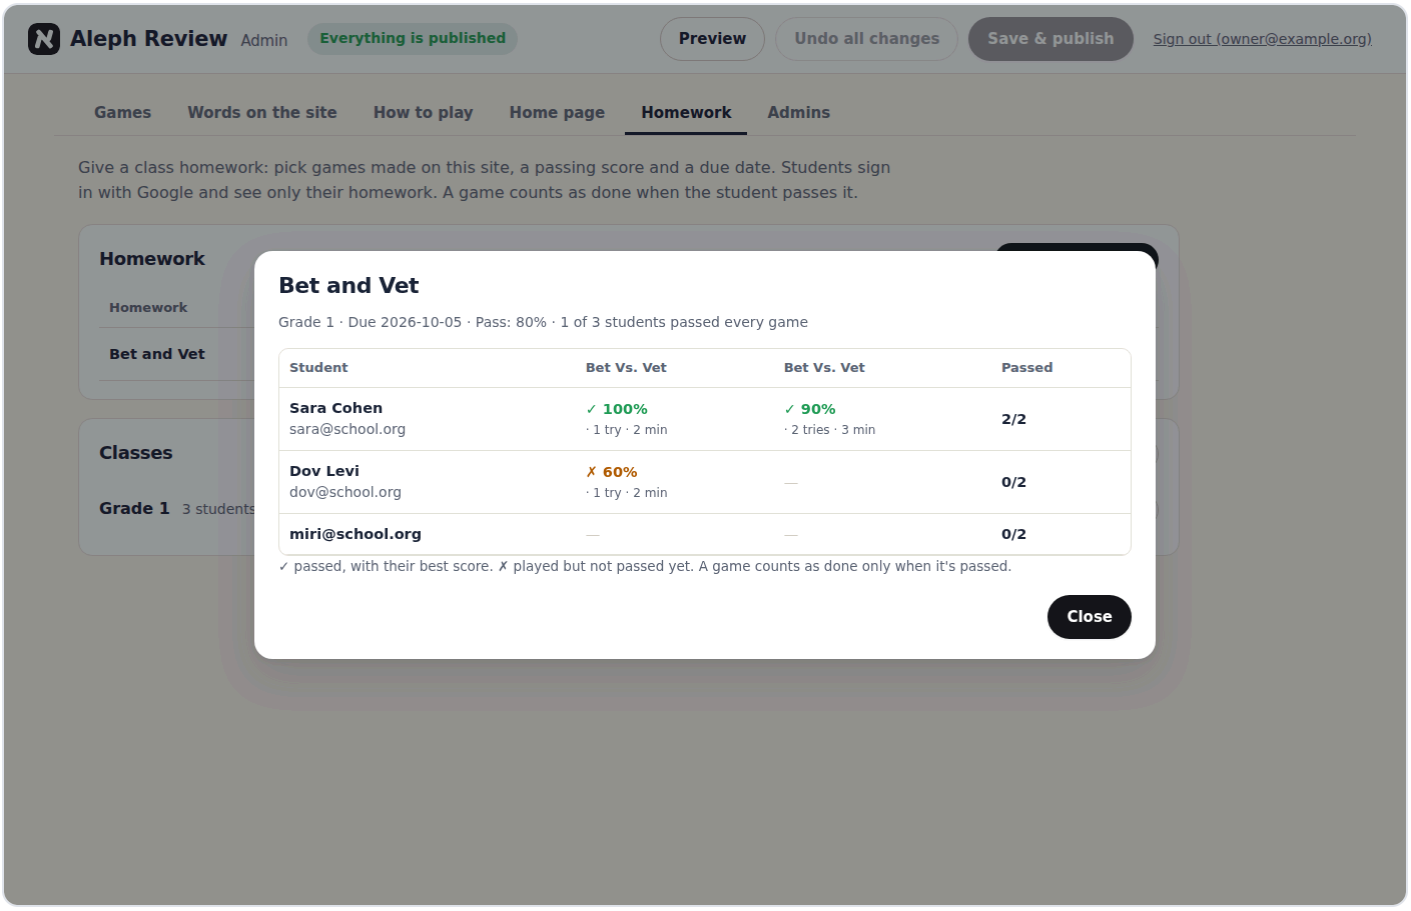

New homework: title, class, due date, passing score and games.

A game counts as **done** only when the student reaches the passing score. They can try again as many times as they like.

Step 3: see who did it

On the Homework tab, click **Who did it** next to a homework.

What you see	Meaning
✓ 100%	Passed, with their best score, the number of tries and the time spent.
✗ 60%	Played but not passed yet (their best score so far).
Opened	Opened the game but didn't finish it.
—	Not opened yet.
Passed 2/2	How many of the games they passed.

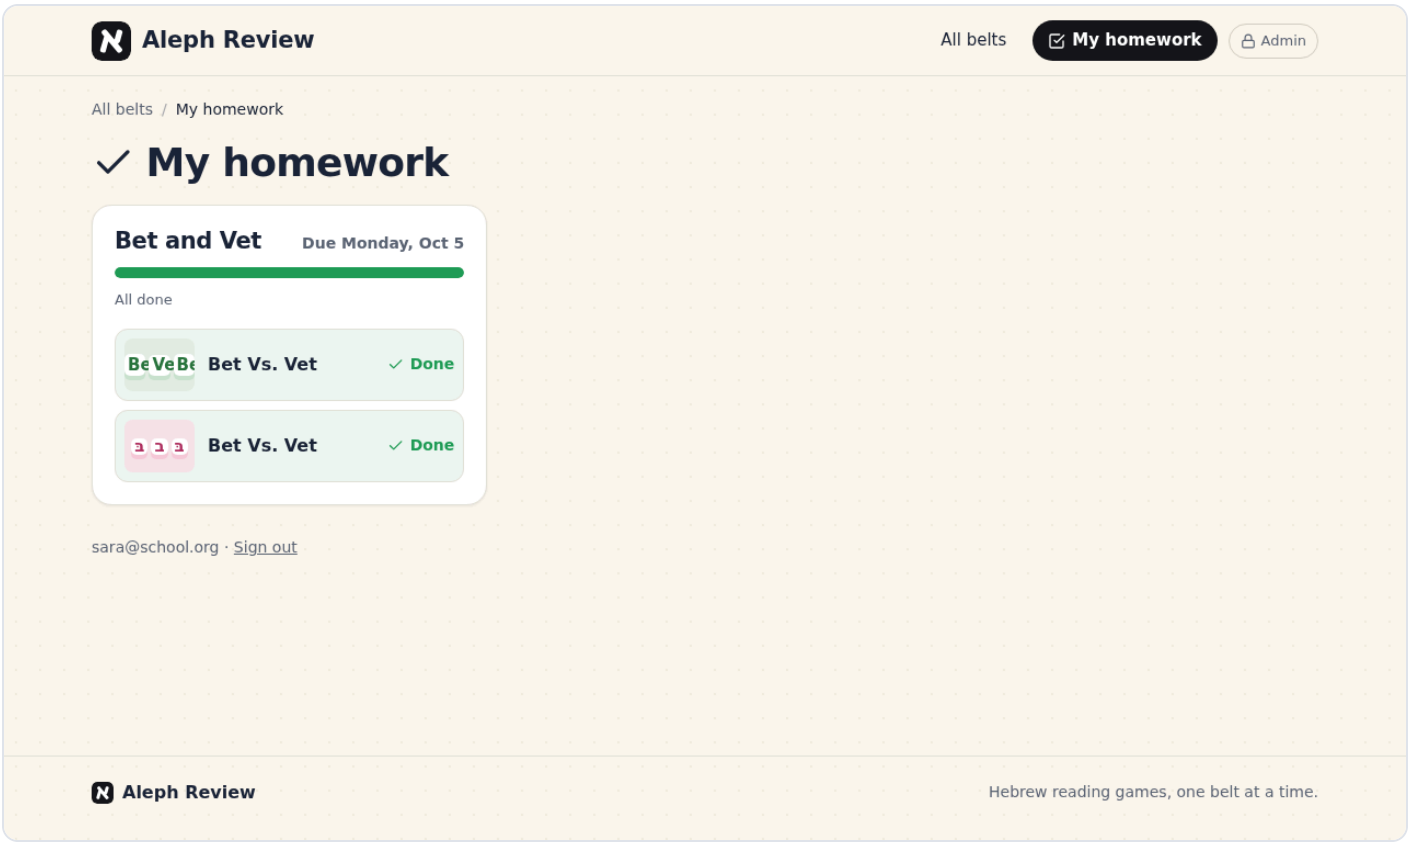

Who did it: each student, each game.

To change or delete a homework or a class, click **Edit** next to it.

What students see

1. Students click **My homework** at the top of the site.
2. They click **Sign in with Google** and use the email that's in their class.
3. They see their homework, the due date, and each game. A game shows **Done** when it's passed.

A student's homework page.

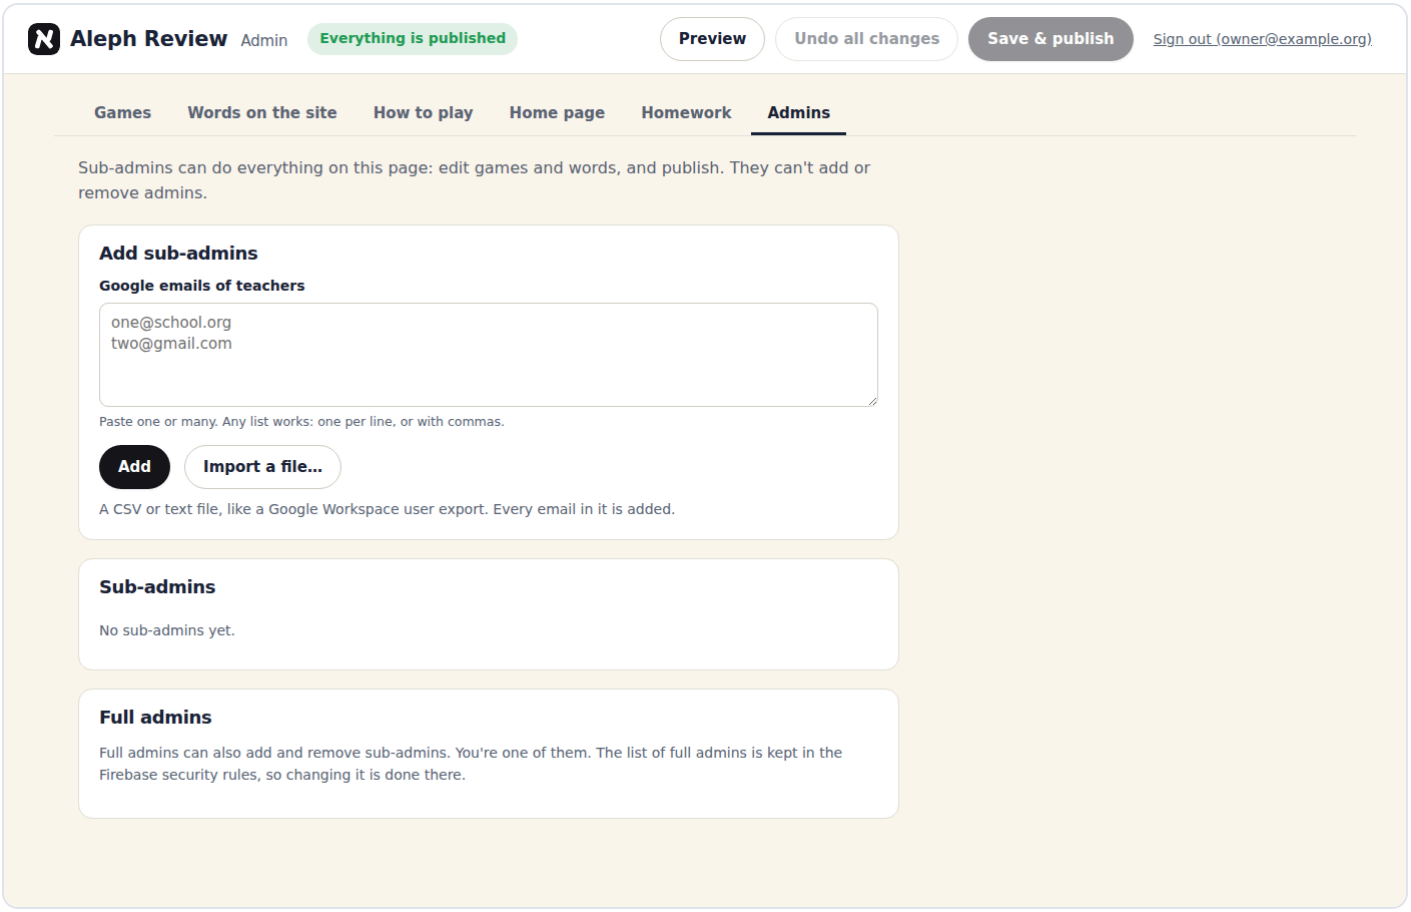

Playing games never needs sign-in. Only homework does.

12. Admins

Only **full admins** see this tab.

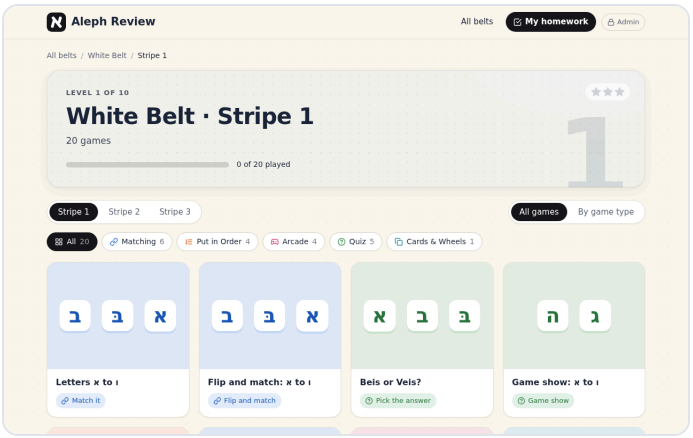

- **Add sub-admins:** paste teachers' Google emails (one per line or with commas) and click **Add** . **Import a file…** adds every email in a CSV or text file.
- **Remove** a sub-admin with the Remove button next to their email.
- **Full admins** are set in the Firebase security rules (Firebase console), not here.

Changes on this tab save right away.

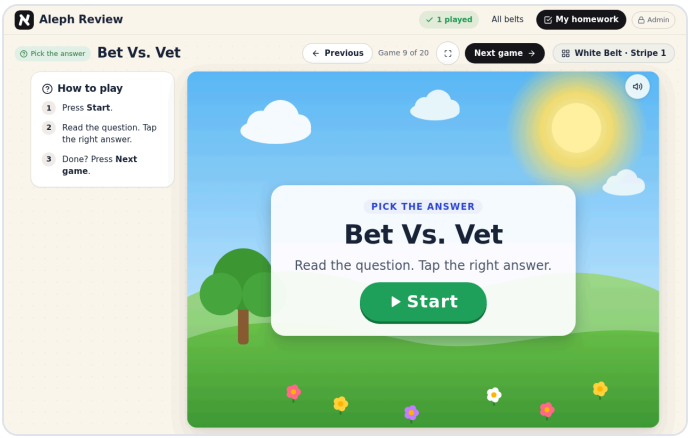

The Admins tab.

13. What students see

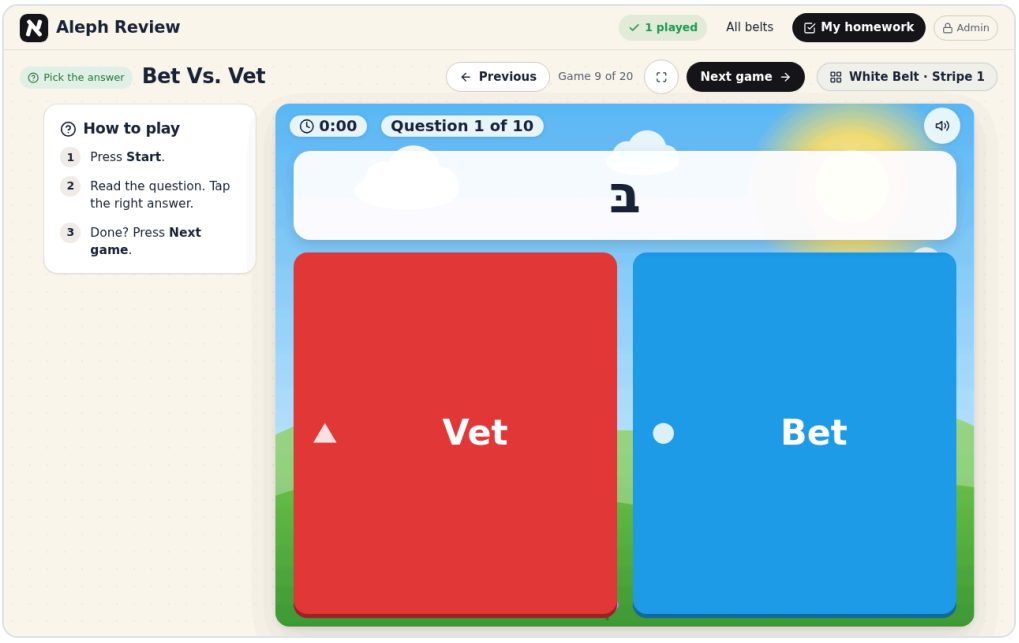

A stripe page: the games, how many are played, and filters by game type.

A game page: How to play on the left, the game on the right.

- Game pages have **Previous** and **Next game** buttons, a **Full screen** button, and a button back to the stripe.
- Games made here show a score at the end. Outside homework there's no pass mark; in homework they see the passing score.
- When a student has played every game in a stripe, they get a star and a short message.

Playing a game made on the site.

14. Tips and fixes

If…	Do this
Students don't see my change	Click **Save & publish**. Then reload the site (on a computer: **Ctrl + Shift + R**).
+ Make a game does nothing	Reload the admin page (Ctrl + Shift + R). If it asks to keep your unpublished changes, either answer works.
I made a mistake and want to start over	Click **Undo all changes** (only for changes not yet published).
I want to check before students see it	Click **Preview**.
A game should be gone for a while	Edit it and tick **Hide this game from students** (you can show it again later). Delete only if you won't need it.
A student can't see homework	Check their email is in the class exactly, and that they signed in with that account.
A game can't be picked for homework	Only games made on this site with a score can be homework. Copy the game as a game made here.
"Played" number looks wrong	It counts games opened in that browser on that computer. It's not the same on other computers.
A game reads aloud and I don't want it	Students can press the game's sound button. To stop it for everyone, ask for the game's reading aloud to be turned off.
The admin page says I'm not an admin	Click **Use a different account** and pick your school account, or ask a full admin to add you.

> **Good habits**
>
> Keep words short and simple for kids. Try each new game with **Save and try it**. Publish when you're done, then check the site.
